Complexity is a very immature field, frequently pursued at the visceral level. It is hard to define what it *is*, but frequently easy to identify it where it exists. I can understand the other reviewers' concerns with the lack of definition, and can only suggest that because of the narrower focus (biology),...

Methods of study are frequently computer simulations that model emergent complexity using simple rules in a recursive way reminiscent of chaos theory research. Indeed, Langton shows that emergent complexity is along the same continuum as chaos, but pitched at the edge between chaos and static order - literally the "edge of chaos".

Roger Lewin engagingly writes of his discussions with leaders in the field of complexity, the study of non-linear, dynamical systems in the life sciences. Studies in 'chaos' theory and related fields like cellular automata have led to new formulations of self-organization and non-vitalistic emergence in living systems.
