I have gone to Green and Zerna for its treatment of plane strain in terms of complex variables. Here it covers much of the material found in Muskhelishvili's Some Basic Problems of the Mathematical Theory of Elasticity, but using a more modern approach that employs the Einstein summation notation. Green was in his lifetime one the U.K.'s leading scientists, who in his career increasingly concerned himself with linear and after World War II nonlinear elasticity theory. In elasticity theory he worked with Wolfgang Zerna, who was in Newcastle in 1948/1949 as part of an academic exchange programme between the U.K. and Germany. (Subsequently, Zerna was a professor in Hannover.) With Rivlin, Green published some of the first works on the mechanics of materials with memory.
